ABOUT ME

Computer Science graduate with a strong foundation in software engineering, data structures, algorithms, and object-oriented programming, and hands-on experience building full-stack applications with JavaScript, Python, React, and REST APIs. Comfortable working across the stack from designing APIs to structuring data pipelines with a track record of shipping complete, working projects independently. Curious, data-driven, and eager to learn new tools quickly while collaborating with a team to turn ideas into shipped features.

PROJECTS

AI Wound Analysis

- Built the backend data layer for an AI-assisted diagnostic tool, implementing authentication and storage with Firebase (Auth + Firestore) for secure, scalable user data management
- Designed the data flow between AI inference services and the application layer, enabling reliable real-time processing and synchronization
- Designed user-specific storage logic to securely associate AI-generated diagnostic results with authenticated users

Money Muling Detection with AI

- Developed a transaction analysis system in Python and FastAPI to process large-scale financial transaction datasets
- Modeled transaction data as graph structures and applied DFS-based relationship analysis to surface suspicious transaction patterns
- Structured analysis output into JSON for consistent, machine-readable reporting
- Processed and analyzed CSV datasets containing thousands of transaction records, applying a data-driven approach to flag anomalies

EDUCATION

University of Mysore (School of Engineering)

Bachelor of Engineering in Computer Science and Design

| 2022-2026

SKILLS

- Programming Languages: JavaScript (ES6+), Python, C++, SQL
 - Core Fundamentals: DBMS, Data Structures & Algorithms, Operating Systems, OOP Concepts
 - Frontend: React, HTML5, CSS3, D3.js, Responsive Design
 - Backend & APIs: FastAPI, REST APIs, JSON Handling
 - Database: MongoDB, SQL, SQLite
 - Tools & Practices: Git, GitHub, VS Code, agile/collaborative development workflows
-
